Abstracts

The global Electrostatic Dehydrator market size is expected to reach \$ 2030 million by 2032, rising at a market growth of 9.6% CAGR during the forecast period (2026-2032). The global gross margin for electrostatic dehydrators is projected to be approximately 36.59% in 2025. Electrostatic dehydrators are used to remove water from crude oil, especially high-water-content crude oil. Their working principle involves using an electric field to cause fine water droplets in the crude oil to aggregate and settle, reducing the water content to meet transportation standards or refining requirements. They are primarily used for dehydrating produced crude oil from oil fields, and are particularly suitable for crude oil with high water content. They are applicable to the export of low- to mid-range crude oil and petroleum refining. Electrostatic dehydration equipment is highly efficient at removing water from high-water-content crude oil (10-30% water content, or even higher), reducing the water content to
