According to our (Global Info Research) latest study, the global Electrostatic Discharge Diodes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

ESD, which is short for electrostatic discharge, is a sudden release of electricity from one charged object to another when these objects come into contact. One of the most common ESD examples is when a person walks over a carpet, charges themselves up with static electricity, and then touches an electrical conductor, and releases charged energy in the form of an ESD strike. These ESD strikes can reach voltages of several kilovolts and can be very harmful to electronics—integrated circuits in particular.
