Abstracts

Electrostatic Dissipative Film is a thin plastic sheet that can be applied to the surface of electronic components (i.e. printed circuit boards (PCBs)) or used as a secondary packaging material. The film provides electrical protection and plays an important role in preventing electric shock. ESD, which stands for Electrostatic Discharge, is the phenomenon in which electrical current builds up on the human body or insulating surfaces and causes a destructive discharge. This phenomenon can damage circuits, especially those of electronic products such as PCs and mobile devices.
