## Abstracts

According to our (Global Info Research) latest study, the global Electrostatic Dissipative(ESD) Powder Coating market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electrostatic Dissipative (ESD) Powder Coating is a specialized type of coating that is engineered to prevent the buildup and discharge of static electricity. This type of coating is particularly important for environments where static electricity can pose safety risks, such as in electronics manufacturing, automotive applications, and other industries where sensitive electronic components are handled. The coating is designed to dissipate static charge in a controlled manner, typically through grounding, preventing the sudden discharges that could otherwise damage electronic equipment or create a spark in volatile environments.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
