According to our (Global Info Research) latest study, the global Electrostatic Fogger market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An electrostatic fogger, also known as an electrostatic sprayer or electrostatic disinfection system, is a specialized device used for applying liquid disinfectants, sanitizers, or other solutions as a fine mist or fog. What sets electrostatic foggers apart from traditional sprayers is their ability to electrically charge the liquid particles as they are sprayed, which causes the droplets to be attracted to surfaces, creating a more even and efficient coating.

Electrostatic foggers use a high-voltage electrostatic charge to positively charge the liquid particles as they are released from the sprayer nozzle. This causes the charged particles to repel one another, allowing for better dispersion and coverage. The charged droplets are attracted to surfaces like a magnet, resulting in a more even and comprehensive coverage of the sprayed area, including hard-to-reach surfaces and crevices. Electrostatic foggers can often provide better coverage with less solution compared to traditional spraying methods, making them more efficient and cost-effective.
