## Abstracts

According to our (Global Info Research) latest study, the global Electrostatic Ionizing Air Blower market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An Electrostatic Ionizing Air Blower is a commonly used equipment for electrostatic elimination, which is designed to remove static charges from the air and reduce the problems associated with static electricity. Static charges could cause damage to electronic components, attract dust particles, spark discharges, and other issues in industrial production and electronic devices. The Electrostatic Ionizing Air Blower can effectively neutralize and eliminate these static charges. The Electrostatic Ionizing Air Blower generates negative ions and positive ions, which are released into the surrounding air. These ions neutralize the static charges in the air, reducing the potential for charge accumulation and static discharge. The ionized air can also help to adsorb particulate matter and pollutants, improving air quality.
