Abstracts

An Elevator, also called Lift in British English, is a type of transport equipment that efficiently carries passengers or freight between the levels of multistory building. Most modern elevators are propelled by electric motors, with the aid of a counterweight, through a system of cables and sheaves (pulleys). By opening the way to higher buildings, the elevator played a decisive role in creating the characteristic urban geography of many modern cities, especially in the United States, and promises to fill an indispensable role in future city development.
