Abstracts

The global Elevator and Escalators Motor market size is expected to reach \$ 2185 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Elevator and escalator motors are specialized electromechanical drive units that convert electrical energy into rotational power to move elevator cars vertically and escalator steps or moving walkways horizontally/inclined; they include traction motors, permanent-magnet synchronous motors (PMSM), geared induction motors, and high-efficiency escalator step-chain motors designed for continuous duty, high torque, low noise, precise speed control, and compliance with global elevator and escalator safety and performance standards.

The elevator and escalator motor industry chain starts upstream with suppliers of electrical steel laminations, copper wire, permanent magnets, power semiconductor modules, gear materials, cast housings, and bearings; midstream manufacturers design and produce traction motors, PMSM units, escalator chain-drive motors, and hydraulic pump motors through processes including winding, machining, magnet assembly, gear production, balancing, and drive integration; downstream, elevator and escalator OEMs, modernization contractors, and service companies deploy these motors in residential, commercial, industrial, and transportation infrastructure projects, with long-term aftermarket demand driven by modernization of aging equipment and continuous maintenance cycles.

Elevator and escalator motors are being deployed across major global projects including high-rise commercial and residential towers in China, India, and the Middle East, airport and metro expansions in Southeast Asia, Europe, and North America, large retail malls and mixed-use developments in Turkey, UAE, and Indonesia, and modernization programs in Japan, South Korea, the US, and Western Europe that replace older geared motors with high-efficiency PMSM units; planned smart-city

districts, transit stations, and logistics hubs worldwide also specify heavy-duty escalator motors and moving walk systems to support increasing passenger flows and energy-efficient urban mobility demands.

2025 Global Market sales Volume: 5.5 million units, Average Global Market Price: USD 282 per unit, Market Average Gross Profit Margin: 22%.
