Elevator parking system is a type of automated parking system that uses an elevator to transport cars to and from parking spaces. This system is designed to save space and increase the efficiency of parking in high-density areas. The basic design of an elevator parking system consists of a steel frame structure with multiple levels of parking bays. The cars are parked on pallets or platforms, which are then lifted up or down by the elevator system. When a driver wants to retrieve their car, they enter a code or swipe their access card at a kiosk, and the elevator retrieves their car and brings it down to the ground level. Elevator parking systems are commonly used in densely populated urban areas, where parking space is at a premium. They are also popular in commercial and residential buildings, where they can increase the number of parking spaces available.
