According to our (Global Info Research) latest study, the global Elevator Position Indicators and Lift Display Modules market size was valued at US\$ 839 million in 2025 and is forecast to a readjusted size of US\$ 1198 million by 2032 with a CAGR of 5.2% during review period.

Elevator Position Indicators and Lift Display Modules are dedicated display components used in elevator cars, landing stations, hall indicators, car operating panels, landing operating panels, and modernization interfaces. Their core function is to convert signals from elevator controllers, car control boards, landing call systems, or communication buses into passenger-readable information, including floor position, travel direction, arrival indication, service status, fire or inspection mode, overload warnings, fault messages, emergency guidance, building announcements, and multimedia content. The product scope covers LED segment displays, LED dot-matrix indicators, LCD display boards, TFT-LCD graphical indicators, touchscreen displays, multimedia elevator screens, hall lantern displays, and connected display systems with content-management capability. Typical interfaces include CAN bus, RS485, serial communication, discrete inputs, and elevator-OEM-specific protocols. The market serves both new elevator installations and modernization or spare-parts replacement demand, with product competitiveness driven by reliability, readability, protocol compatibility, EMC performance, installation flexibility, accessibility, and long-term serviceability.

Based on our research, elevator display products should be viewed as a dedicated elevator HMI and signaling component rather than a generic digital signage product. The essential function is to provide passengers and maintenance personnel with real-

time floor, direction, arrival, service, fire, inspection, overload, fault and emergency information. This safety-and-guidance role makes basic elevator displays a recurring and resilient demand category, while the upgrade cycle is driven by TFT screens, multimedia interfaces, connected content management, touchscreen functions and modernization projects.

Demand growth is increasingly linked to modernization rather than only new installations. Mature markets have large installed bases and aging equipment, making display, COP, LOP and hall indicator replacement a relatively low-cost but highly visible upgrade. In China, the new installation cycle is more exposed to property-market fluctuations, but the expanding installed base creates a larger replacement and aftermarket opportunity. Premium commercial buildings, hotels, hospitals, transport hubs and public facilities are more likely to adopt TFT, multimedia and connected display systems, while residential and budget projects continue to rely on LED, dot-matrix and basic LCD products.

From a technology perspective, the product roadmap is moving from numeric floor indication to graphical, connected and experience-oriented interfaces. LED and dot-matrix displays remain relevant because of low cost, long life and easy replacement, while TFT-LCD modules are becoming the mainstream option for mid- to high-end projects due to their ability to display icons, multi-language text, travel direction, status messages and branded graphics. Connected multimedia displays add announcements, weather, news, advertising and emergency guidance. Future competitiveness will depend not only on screen hardware, but also on protocol compatibility, retrofit efficiency, content-management software, remote update capability and integration with elevator controllers.

From the perspective of industry dynamics, the digitalization and modernization businesses of global elevator OEMs are driving the upgrade of display modules. Official materials from KONE, Otis, Schindler and other elevator OEMs show that their maintenance and modernization businesses are sizable, while they are also continuing to promote elevator information screens, media screens, connected displays and passenger communication interfaces. KONE's official website also discloses its planned combination with TKE; if completed, the transaction would further strengthen leading elevator OEMs' bargaining power in maintenance, modernization and digital component procurement. Independent display suppliers will need to differentiate themselves through customization, compatibility, delivery speed, retrofit adaptability and regional service capabilities; otherwise, they may face pressure from integrated elevator OEM display solutions and generic digital signage manufacturers.
