Abstracts

The global Elevator Rolling Guide Shoes market size is expected to reach \$ 146 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Elevator rolling guide shoes are guiding components installed on elevator cars or counterweights. They use internal rollers (usually nylon or polyurethane-coated rollers) to contact and roll with the elevator guide rails, replacing traditional sliding friction guide shoes. This provides guidance and stability constraint to the elevator car during operation, significantly reducing frictional resistance, operating noise, and energy consumption, while improving smoothness and comfort. They are widely used in medium- and high-speed elevator systems and those requiring a high level of passenger comfort. In 2025, sales reached 4.76 million units, with an average price of \$20 per unit, total production capacity of 5 million units, and a gross profit margin of 33%.

From a market structure perspective, elevator rolling guide shoes are essentially key safety and comfort components for elevators, and demand is highly correlated with new elevator installations and upgrade cycles. The current global market growth primarily stems from urbanization in emerging economies and the demand for energy-saving and noise-reduction upgrades to existing elevators. In particular, the increasing demands for operational comfort in mid-to-high-end residential buildings, commercial complexes, and public transportation are driving a gradual increase in the replacement rate of traditional sliding guide shoes by rolling guide shoes. However, overall, this market still exhibits characteristics of 'low unit price, high inventory, and long replacement cycle,' with growth relying more on structural upgrades than on absolute expansion in installed capacity.

From a competitive perspective, this sector has relatively low technological barriers but strong engineering reliability requirements. The market is dominated by elevator manufacturers and their supporting systems. Leading companies such as Otis, KONE, Schindler, and domestic players like Shanghai Mitsubishi and Guangri Elevator control core components through supply chain binding. Third-party component manufacturers mainly focus on regional supply and maintenance/replacement markets. Looking ahead, on the one hand, rolling guide shoes will upgrade towards low-friction materials, long-life bearing structures, and maintenance-free designs. On the other hand, as the existing elevator maintenance market expands, the profit margin of aftermarket replacement parts will gradually increase, presenting a structural opportunity of 'weak growth in complete elevator systems and more stable maintenance parts.'
