Elevator Safety Light Curtain is a safety protection device based on infrared photoelectric sensing technology. It is installed at the entrance of the elevator door and is used to detect obstacles in the door area in real time to prevent the elevator door from pinching passengers or objects during the closing process, thereby improving the safety of elevator operation. The elevator safety light curtain consists of a transmitter and a receiver. It forms a dense 'light curtain' by emitting multiple infrared beams. It has high sensitivity, no physical contact, and strong anti-interference. It is widely used in various types of elevators such as commercial buildings, residences, hospitals, and subway stations.
