Abstracts

ELISA Kit (enzyme-linked immunosorbent assay) is the most widely used technology in enzyme immunoassay technology. Enzyme-linked immunosorbent assay (ELISA), also known as an enzyme immunoassay (EIA), is a biochemical technique used mainly in immunology to detect the presence of an antibody or an antigen in a sample. ELISA kit involve attachment of a capture antibody to a solid phase support. Samples containing known or unknown antigen are then added in a matrix or buffer that will minimize attachment to the solid phase. An enzyme-labeled antibody is then added for detection. Enzyme-linked immunosorbent assay (ELISA) is an analytical, plate-based technique to detect and quantify the presence of a target analyte in a liquid sample using antibodies.
