According to our (Global Info Research) latest study, the global Ellipsometer market size was valued at USD 40 million in 2023 and is forecast to a readjusted size of USD 51 million by 2030 with a CAGR of 3.4% during review period.

An ellipsometer enables to measure the refractive index and the thickness of semi-transparent thin films. The instrument relies on the fact that the reflection at a dielectric interface depends on the polarization of the light while the transmission of light through a transparent layer changes the phase of the incoming wave depending on the refractive index of the material. An ellipsometer can be used to measure layers as thin as 1 nm up to layers which are several microns thick. Applications include the accurate thickness measurement of thin films, the identification of materials and thin layers and the characterization of surfaces.

There are two core manufacturers of ellipsometer worldwide, J.A. Woollam and Horiba, which together account for more than 50% of the global market share. North America is the main market with about 50%, followed by Europe with about 45%.
