According to our (Global Info Research) latest study, the global Ellipsometry market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Ellipsometry is an optical technique used to study the dielectric properties (complex refractive index or dielectric function) of thin films. Ellipsometer is used to measure the polarization change of reflection or transmission and compare it with the model. Ellipsometry can be used to characterize the composition, roughness, thickness (depth), crystalline properties, doping concentration, conductivity and other material characteristics. It is very sensitive to the variation of the optical response of the incident radiation interacting with the material under study.
