According to our (Global Info Research) latest study, the global ELSFP Module for CPO market size was valued at US\$ 3.70 million in 2025 and is forecast to a readjusted size of US\$ 3152 million by 2032 with a CAGR of 92.8% during review period.

The ELSFP Module for CPO is a standardized external laser source module designed in compliance with the OIF-ELSFP specification. As a dedicated supporting light source component for co-packaged optics (CPO) systems, it strictly conforms to the ELSFP-specific technical specifications formulated by the Optical Internetworking Forum (OIF), adopts an SFP-like pluggable package, and features high standardization and versatility. Centered on stable continuous laser output, this module adopts an SFP-like pluggable structure and is only designed to provide pure and continuous laser signals without data transceiving, signal modulation or information transmission functions. It only serves as a dedicated external light source to deliver stable laser support for silicon photonic engines in CPO systems. By physically separating the laser source from switching chips and application-specific integrated circuits, it completely eliminates thermal interference caused by built-in light sources, significantly optimizes the thermal management efficiency of co-packaged optics systems, supports independent disassembly, maintenance and replacement of laser modules without dismantling the entire CPO equipment, and greatly improves system maintainability and component replacement flexibility. Built with highly stable distributed feedback lasers, optical isolators, thermoelectric cooling temperature control units and power monitoring circuits, the module can precisely control laser power and wavelength stability, providing continuous and reliable standardized laser input for silicon photonic engines of co-packaged optics equipment of various specifications such as 51.2T and 102.4T. It is a core supporting light source component for CPO systems to achieve high-bandwidth

and high-reliability optical interconnection, as well as a key supporting part ensuring the stable operation of CPO equipment. In 2025, the price of global ELSFP Module for CPO varies with different specifications, ranging from 300 to 1,000 USD per unit, and the average gross margin of the industry is approximately 37%.

The ELSFP Module for CPO will achieve rapid development alongside the large-scale deployment of co-packaged optics technology. Industry technical standards will continue to improve, and product compatibility and versatility will be steadily enhanced. Module performance will be upgraded toward higher laser output stability, lower power consumption and better temperature control capability. Multi-channel integration and wavelength division multiplexing integrated design will become the mainstream trend, further meeting the stringent light source requirements of high-end computing equipment. Application scenarios will gradually expand from supercomputing centers and large cloud data centers to telecom core networks and other fields, while the hot-pluggable and maintenance-friendly structural design will be continuously optimized. The upstream and downstream industrial chains will jointly promote the upgrading of core devices and packaging processes. Products will gradually move from pilot applications to mass commercialization, becoming core supporting components for next-generation high-bandwidth optoelectronic convergence systems.
