According to our (Global Info Research) latest study, the global Email Security Management Software market size was valued at US\$ 6297 million in 2025 and is forecast to a readjusted size of US\$ 9290 million by 2032 with a CAGR of 5.7% during review period.

Email security management software is a type of professional security tool focused on protecting an organization's email system from cyber threats, data breaches, and compliance risks.

The demand for email security management software continues to grow, primarily driven by multiple factors, including the increasing focus of cyberattacks on email channels, the expansion of email exposure due to the widespread adoption of remote work, increasingly stringent data privacy and compliance regulations, and the heightened emphasis on business continuity during enterprise digital transformation. In recent years, phishing emails, supply chain attacks, and AI-generated email spoofing have become increasingly sophisticated, causing significant economic losses and reputational risks, prompting organizations to shift from reactive to proactive defense. Simultaneously, while the widespread use of cloud email has improved collaboration efficiency, it has also exposed the inadequacies of native security capabilities, further driving enterprises to deploy third-party professional email security solutions to build a defense-in-depth system.
