## Abstracts

According to our (Global Info Research) latest study, the global Emamectin Benzoate TC market size was valued at US\$ 1487 million in 2024 and is forecast to a readjusted size of USD 1896 million by 2031 with a CAGR of 4.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Emamectin Benzoate TC is a highly effective and broad-spectrum macrocyclic lactone insecticide, with the active ingredient being emamectin benzoate, a derivative of avermectin. It acts by enhancing the inhibitory effect of gamma-aminobutyric acid (GABA) in the nervous system of pests, leading to rapid paralysis, cessation of feeding, and eventual death. Its primary targets include Lepidoptera (e.g., cotton bollworm, diamondback moth), Coleoptera (e.g., Colorado potato beetle), and certain mite species, making it widely applicable in agriculture, forestry, and horticulture. Due to its potent bioactivity, extremely low dosages (typically 0.5-2 grams per mu) can achieve effective pest control, while maintaining relatively low mammalian toxicity, thus playing a key role in Integrated Pest Management (IPM) systems. Emamectin Benzoate TC is usually supplied as a high-purity (?90%) solid or crystalline material, requiring further formulation into emulsifiable concentrates (EC), water-dispersible granules (WG), or suspension concentrates (SC) for field application.
