According to our (Global Info Research) latest study, the global Embedded Multi Media Card (emmc) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

eMMC is an embedded memory standard specification established by the MMC Association and mainly targeted at products such as mobile phones or tablet computers. eMMC integrates a controller in the package, provides standard interfaces and manages flash memory, allowing mobile phone manufacturers to focus on other parts of product development and shorten the time to market products. It usually consists of an embedded storage solution with an MMC (Multimedia Card) interface, flash memory device and host controller. All in a small BGA package. With interface speeds up to 400MBytes per second, eMMC has fast, scalable performance. At the same time, its interface voltage can be 1.8V or 3.3V.
