## Abstracts

The global Embedded Multi Media Card (emmc) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

eMMC is an embedded memory standard specification established by the MMC Association and mainly targeted at products such as mobile phones or tablet computers. eMMC integrates a controller in the package, provides standard interfaces and manages flash memory, allowing mobile phone manufacturers to focus on other parts of product development and shorten the time to market products. It usually consists of an embedded storage solution with an MMC (Multimedia Card) interface, flash memory device and host controller. All in a small BGA package. With interface speeds up to 400MBytes per second, eMMC has fast, scalable performance. At the same time, its interface voltage can be 1.8V or 3.3V.
