According to our (Global Info Research) latest study, the global Embedded Partial Discharge (PD) Sensor market size was valued at USD 850.9 million in 2022 and is forecast to a readjusted size of USD 1349.8 million by 2029 with a CAGR of 6.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Partial discharge occurs inside insulation in assets such as a transformer, turbine generator, motor, switchgear or cable. Partial discharge occurs when one part of the insulation cannot withstand electric stress, so it flashes over. At that time, the gases are ionized and the voltage drops quickly. Then the current pulse equalizes the remaining charge in the remaining insulation. It's a rapid process that negatively affects the asset's life. This report focusses on Embedded Partial Discharge (PD) Sensor market.
