## Abstracts

Embolization Particle or embolisation refers to the passage and lodging of an embolus within the bloodstream. It may be pathological (in which sense it is also called embolism), for example a pulmonary embolism, or therapeutic, as a hemostatic treatment for bleeding or as a treatment for some types of cancer by deliberately blocking blood vessels to starve the tumor cells.

Scope of the Report:

This report focuses on the Embolization Particle in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. USA has the largest global export quantity and manufacturers in Embolization Particle market, while the Europe is the second sales volume market for Embolization Particle in 2016.
