According to our (Global Info Research) latest study, the global Embryo Culture Medium market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Embryo culture medium mainly includes water, inorganic ions, energy substrates, amino acids, vitamins, proteins and other components. Each of these components plays an important role in the growth and development of the embryo. After the test tube baby technology takes the sperm and eggs out of the body, the fertilization, cleavage, and blastocyst formation are completed in vitro, and the whole process is carried out in the culture medium. For fertilized embryos, the culture medium provides a suitable environment and essential nutrients for the growth and development of the embryos in vitro.
