## Abstracts

The global EMC Cable Entry System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

EMC cable entry system is a component or system used to ensure electromagnetic compatibility (EMC) and provide effective shielding for cables and cable penetrations in electronic enclosures, cabinets, or control panels.

The EMC cable entry system is designed to prevent electromagnetic interference (EMI) from entering or exiting through cable penetrations, which can negatively impact the performance or functionality of electronic equipment. It helps to maintain the integrity of the electromagnetic shield and reduce leakage of electromagnetic fields.

The system typically includes various components such as cable glands, grommets, shields, sealing materials, and grounding mechanisms. These components are designed to provide a secure and robust connection between the cable and the enclosure, ensuring proper grounding and electrical continuity while maintaining effective electromagnetic shielding.

EMC cable entry systems may incorporate features like conductive or shielded cables, cable shielding glands, or gaskets to provide a high level of protection against electromagnetic interference. They are used in applications where electromagnetic compatibility and noise immunity are critical, such as in power distribution, control systems, telecommunication networks, or sensitive electronic equipment.

The EMC cable entry system helps ensure proper cable management, minimize electromagnetic emissions, and enhance the overall electromagnetic performance and

reliability of electronic systems.
