According to our (Global Info Research) latest study, the global EMC-EMI Chokes market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

EMC/EMI Chokes are electronic components used to suppress electromagnetic interference (EMI) and electromagnetic compatibility (EMC) issues. When designing electronic equipment, when the current in the electronic equipment flows through the wires, it will generate an electromagnetic field and emit electromagnetic waves. These electromagnetic waves may interfere with the normal operation of other electronic equipment or its own circuit. At this time, EMC/EMI Chokes can reduce this interference by controlling and filtering the current.

EMC/EMI Chokes are usually made of magnetic materials, such as ferrite, nickel zinc, iron oxide copper, iron oxide and other materials. They usually come in the form of coils and can be used in electronic equipment such as cables and power cords.
