EMC filters for shielded rooms are electromagnetic compatibility devices installed at the entry point of the shielded room. They can effectively filter out high-frequency interference signals on power lines and signal lines, prevent external interference signals from entering the shielded room, and also prevent interference signals generated in the room from propagating outward. The design and selection of EMC filters for shielded rooms depends on the required filtering performance, the working environment, and the characteristics of the equipment to be protected. The correct installation and use of these filters is essential to ensure the effectiveness of the shielded room.
