EMC Shielding Gasket is a specialized electromagnetic compatibility component used to provide conductive sealing and prevent electromagnetic interference leakage between mating surfaces of electronic equipment. It is typically manufactured from conductive elastomers, metal meshes, conductive foams, or composite materials, offering shielding effectiveness, environmental sealing, and mechanical compliance. The product is widely used in consumer electronics, telecommunications equipment, automotive electronics, aerospace systems, medical devices, and industrial control equipment. The product boundary includes finished EMC shielding gasket components and excludes raw conductive materials and complete electromagnetic shielding enclosures.

The EMC shielding gasket industry chain includes upstream suppliers of conductive materials, elastomers, metal meshes, foams, adhesives, and precision processing materials; the midstream sector covers material formulation, molding, cutting, coating, assembly, and performance testing; the downstream sector includes electronic devices,

communication infrastructure, automotive electronics, aerospace equipment, medical electronics, and industrial systems. Market growth is driven by increasing electromagnetic compatibility requirements, electronic device miniaturization, and the expansion of high-frequency communication technologies.
