## Abstracts

The global Emergency Care and Resuscitation Solution market size is expected to reach \$ 5886 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Emergency Care and Resuscitation Solution is an integrated medical support system for life-threatening emergencies like cardiac arrest, respiratory failure and severe trauma, spanning the full pre-hospital to in-hospital emergency continuum and adaptable for clinical and public scenarios. It combines specialized medical hardware (defibrillators, mechanical CPR devices, vital sign monitors), disposable clinical consumables, intelligent digital software (real-time data capture, remote guidance, team coordination) and professional supporting services (resuscitation training, equipment maintenance, emergency plan design), engineered to standardize critical life-saving actions, reduce human error in high-pressure settings, enable seamless pre-hospital and in-hospital collaboration and data sharing. Deployed across healthcare institutions, EMS systems and public safety agencies, its core goal is to maximize survival rates of critically ill emergency patients, minimize post-resuscitation complications and build a unified, intelligent and scalable emergency care framework.

The Emergency Care and Resuscitation Solution industry is defined by key trends in 5G/AI/IoT integration for seamless pre-hospital-in-hospital collaboration, miniaturization/intellectualization of core resuscitation equipment, a shift from passive response to proactive critical illness pre-warning, and global pushes for unified technical and clinical standards; core opportunities stem from rigid demand driven by aging populations and rising chronic diseases, heavy government investment in EMS infrastructure and AED deployment for 'golden 4-minute' first aid circles in emerging markets, policy support for public first aid training, new application scenarios like drone medical delivery and mobile ICUs, and strong demand for domestic substitution of high-end resuscitation equipment; major challenges include global uneven medical resource

distribution and acute shortages of professional emergency personnel, incompatible equipment interfaces and a lack of unified international standards, high costs of advanced intelligent solutions limiting adoption in low-resource areas, import dependence for high-end core equipment components, and low public first aid knowledge and equipment popularization rates hindering out-of-hospital resuscitation success.
