An emergency floating dock is a temporary or semi - permanent floating structure designed for rapid deployment in emergency situations. It is typically constructed using buoyant materials such as foam - filled pontoons or air - chambers, which provide the necessary buoyancy to keep the dock afloat on the water surface.

The main purpose of an emergency floating dock is to facilitate the rescue and evacuation of people and the transportation of essential supplies in scenarios such as natural disasters (e.g., floods, hurricanes), man - made accidents (e.g., oil spills, shipwrecks), or other emergencies where traditional dock infrastructure may be damaged or inaccessible. It can serve as a platform for helicopters to land and take off in some cases, and also allow the mooring of rescue boats and other watercraft. Emergency floating docks are often equipped with safety features such as guardrails, lighting systems, and connection points for towing or securing.
