According to our (Global Info Research) latest study, the global EMI Conductive Film market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

EMI conductive film is a material used for electromagnetic interference shielding. It can bond conductive particles or metal mesh to a flexible or rigid substrate through conductive glue or conductive adhesive to form a film with a certain thickness and conductivity. EMI conductive film can be used for grounding and shielding of electronic equipment such as display modules, camera modules, connectors, ventilation panels, etc. to improve signal integrity and reduce electromagnetic interference. The advantage of EMI conductive film is that it can save space and cost, support late addition of design, and eliminate the need to redesign the electrical system.
