EMI shielding gasket, also known as conductive gasket or conductive rubber gasket, is a shielding material specially designed for electronic equipment. It can fill the gaps in the chassis of electronic equipment and maintain the conductive continuity of the gaps, thereby effectively reducing the contact resistance of holes, gaps, and grooves, reducing the voltage at both ends of the joint, and reducing electromagnetic leakage in the gaps.

With the rapid development of the global electronics manufacturing industry and the continuous improvement of the performance requirements of electronic products, the market demand for EMI shielding gaskets continues to grow. As one of the important bases of the global electronics manufacturing industry, China also has a strong demand for EMI shielding gaskets. With the continuous upgrading and transformation of the domestic electronics industry, as well as the rapid development of emerging technologies such as 5G and the Internet of Things, the EMI shielding gasket market will usher in a broader development prospect.
