According to our (Global Info Research) latest study, the global EMI Suppression Film Capacitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

EMI suppression film capacitors are capacitors used to suppress high-frequency electromagnetic interference occurring in circuits. It usually consists of an insulating film sandwiched between two metal electrodes. These capacitors are designed to have high impedance in the high frequency range (hundreds of kilohertz to several gigahertz) to filter out interfering signals and provide clean power in the circuit. They are commonly used in electronic devices such as computers, cell phones, televisions, and audio equipment. The advantages of EMI suppression film capacitors include high stability, accurate capacitance value, small size, light weight, good temperature stability, and wide frequency response range.
