Palladium based ECCs are projected to constitute the fastest-growing material type segment of the ECC market. The major product types available in the market are palladium, platinum and rhodium-based emission control catalysts.

SCOPE OF THE REPORT:

This report focuses on the Emission Control Catalyst in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. High-growth application areas such as automotive, industrial, and others, and the stringent emission regulations due to increased concern over environmental pollution are key factors driving the growth of the global ECC market.

Palladium is estimated to be the largest market for ECC, as use of palladium has gradually increased in diesel catalytic converters in the past few years. Palladium is used as an oxidation catalyst. It is more widely used in gasoline auto catalysts (petrol-based engines) than in diesel engines.

The worldwide market for Emission Control Catalyst is expected to grow at a CAGR of roughly 11.2% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
