Employee lifecycle management software is an integrated human resources digital platform, the core of which is to record, manage and empower employees throughout the entire career life cycle from potential candidates, onboarding, on-the-job development to eventual resignation or retirement. It integrates modules such as recruitment, onboarding, performance, training, succession, compensation and benefits, and resignation to connect scattered HR affairs into a continuous data stream, aiming to unify employee data, standardize HR processes, improve employee experience, and support management in talent decision-making and organizational planning based on a complete data link.

Driven by digital transformation and the 'people-oriented' management concept, the employee full-cycle management software market has broad prospects. Its development is evolving beyond basic transaction automation to intelligence, experience and strategy: with the help of AI technology to achieve intelligent analysis such as talent portrait and turnover risk prediction; Create personalized, social interactive experiences through employee portals and mobile apps to increase engagement; As a core data hub, it is deeply integrated with business systems to provide talent insights for organizational strategy.
