The global EMS and ODM market size is expected to reach \$ 1468540 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

Electronics manufacturing services (EMS) is a term used for companies that test, manufacture, distribute, and provide return/repair services for electronic components and assemblies for original equipment manufacturers (OEMs). The concept is also referred to as electronics contract manufacturing (ECM). An original design manufacturer (ODM) is a company that designs and manufactures a product as specified and eventually rebranded by another firm for sale. Such companies allow the firm that owns or licenses the brand to produce products (either as a supplement or solely) without having to engage in the organization or running of a factory. EMS and ODM are both outsourcing models in the electronics manufacturing ecosystem. The key distinction lies in design capability: EMS focuses on manufacturing and supply chain execution, while ODM integrates design and production, offering higher value-added services and broader involvement in product development.

EMS and ODM market represents a critical backbone of the global electronics industry, providing end-to-end solutions ranging from product design, prototyping, and component sourcing to large-scale manufacturing, assembly, and after-sales services. As OEMs increasingly focus on core competencies such as branding, software, and ecosystem development, outsourcing to EMS and ODM providers has become a dominant industry trend. The market is highly concentrated in consumer electronics, computing, and data center segments. Meanwhile, Chinese manufacturers are rapidly strengthening their positions through cost advantages, supply chain integration, and proximity to key component ecosystems.

This report studies the global EMS and ODM demand, key companies, and key regions.
