## Abstracts

The global Emulsion Polyacrylamide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Emulsion polyacrylamide is prepared by dispersion or inverse emulsion polymerization, which is a form of polyacrylamide liquid. In addition to the characteristics of solid polyacrylamide flocculants, the emulsion also absorbs suspended solids in water particles through the molecular chains of polar groups, and forms large flocs through inter-particle bridging or electricity. Emulsion polyacrylamide is widely used in various domestic sewage, chemical wastewater, oilfield sewage, sludge dewatering, papermaking and other fields.

This report studies the global Emulsion Polyacrylamide production, demand, key manufacturers, and key regions.
