According to our (Global Info Research) latest study, the global Electronic Toll Collection market size was valued at USD 4981 million in 2023 and is forecast to a readjusted size of USD 6348.8 million by 2030 with a CAGR of 3.5% during review period.

Electronic toll collection is used to collect tolls on roads by electronic methods.

This technology determines that the cars and other automobiles that pass through the toll are enrolled in the system. If not, it alerts the tax collectors that the respective cars are not enrolled in the system. The toll from the enrolled cars is automatically debited, thus avoiding the need for the car to stop at the collection counter.
