## Abstracts

According to our (Global Info Research) latest study, the global Encapsulated Calcium Propionate market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Encapsulated calcium propionate is a food preservative in which calcium propionate, a mold and bacteria inhibitor, is covered in a protective coating. This encapsulation technique improves the stability and regulated release of calcium propionate in food products, resulting in longer shelf life. The coating, which is often constructed of food-grade materials, limits direct interaction with the food matrix, reducing the possibility of taste, texture, or quality modifications. Encapsulated calcium propionate is used in a variety of food products, providing a dependable solution for manufacturers looking to maintain freshness and safety while retaining flavor characteristics in the constantly evolving environment of food processing and preservation.
