Abstracts

The global Encapsulated Calcium Propionate market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Encapsulated calcium propionate is a food preservative in which calcium propionate, a mold and bacteria inhibitor, is covered in a protective coating. This encapsulation technique improves the stability and regulated release of calcium propionate in food products, resulting in longer shelf life. The coating, which is often constructed of food-grade materials, limits direct interaction with the food matrix, reducing the possibility of taste, texture, or quality modifications. Encapsulated calcium propionate is used in a variety of food products, providing a dependable solution for manufacturers looking to maintain freshness and safety while retaining flavor characteristics in the constantly evolving environment of food processing and preservation.

This report studies the global Encapsulated Calcium Propionate production, demand, key manufacturers, and key regions.
