Abstracts

Resin systems are intended to protect and insulate printed circuit boards and electronic components from the pressures of harsh and challenging environments, including; vibration moisture, physical shock and general contamination. By encapsulating the entire device, resins can provide a complete barrier against such environments contributing superior performance under extreme circumstances. It is thermally conductive, shock absorbent, electrical insulating, and resistant to chemical & environmental exposure. In addition, this includes low pressure molding, increases the advancements in development of sensors for research purposes, and the medical sector has surged the demand for encapsulation resins.
