The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

An enclosed AC-DC converter is a common AC-to-DC power converter commonly used in electronic equipment and power systems to convert AC voltage to DC voltage for use by electronic equipment. The working principle of the closed-type AC-DC converter is to convert the AC input into DC, and then realize the smoothness and stability of the output voltage through circuit elements such as inductors and capacitors.

The enclosure of an enclosed AC-DC converter is usually a sealed metal box with a DC output port and an AC input port inside. The internal circuitry of such converters is usually packaged on a modular circuit board to protect the circuit components from the environment and external interference. The closed-type AC-DC converter has the characteristics of high efficiency, stability and reliability, and is widely used in various electronic equipment and industrial control systems.
