The global End Cap Fusing Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

End cap fusion splicers are generally fusion splicers used in the field of optical communications. The principle of operation is to use a high voltage arc to melt two optical fiber cross-sections while using a high precision motion mechanism to gently advance the two fibers into one, in order to achieve coupling of the fiber optic mode field. The fusion splicer is mainly used by telecom operators, engineering companies and institutions in the construction of optical cable lines, line maintenance, emergency repair, production and testing of optical fibre devices and research and teaching in research institutes.
