The global End-of-life Tire Recycling System market size is expected to reach \$ 2976 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

A waste tire recycling system refers to a comprehensive processing system that uses a complete set of industrial processes to recycle, decompose, and reprocess end-of-life tires, transforming them into recycled materials or energy products that can be reused in the industrial system. This system typically integrates units such as cutting, shredding, crushing, sorting, grinding, or pyrolysis to achieve efficient separation of rubber, steel wire, and fibers, producing products such as rubber granules, rubber powder, recycled rubber, pyrolysis oil, or carbon black. It is widely used in road engineering, rubber product manufacturing, energy utilization, and municipal solid waste treatment, and is a key infrastructure for promoting solid waste reduction, resource recovery, and the development of a circular economy. In 2025, sales reached 37,000 units, with an average price of US\$46,000, total production capacity of 40,000 units, and a gross profit margin of 33%.
