Abstracts

The global Endobronchial Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Endobronchial Valve (EBV), is a medical device, which is implanted in an airway in the pulmonary system. These are one-way valves designed to allow air to exit the targeted lung segment without allowing reentry of the inspired air, thus leading to deflation of the emphysematous portion of the lung and volume reduction. Endobronchial valves are typically implanted using a flexible delivery catheter advanced through a bronchoscope, and thus they are minimally invasive.

This report studies the global Endobronchial Valve production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Endobronchial Valve, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
