## Abstracts

According to our (Global Info Research) latest study, the global Endogenous Neuromodulation Platform market size was valued at US\$ 1329 million in 2024 and is forecast to a readjusted size of USD 2912 million by 2031 with a CAGR of 11.8% during review period.

The endogenous neuromodulation platform is a system based on neurobiological principles that achieves precise intervention in the self-regulation ability of the nervous system by regulating neurotransmitters, receptor activity or neural circuit function in the body. This platform usually integrates technologies such as molecular biology, pharmacology, gene editing and intelligent monitoring. It can dynamically regulate brain or peripheral nerve activity without exogenous stimulation or implanted devices. It is widely used in the treatment of neuropsychiatric diseases, brain function recovery and the development of individualized neuromodulation strategies.
