Abstracts

The global Endoscope Closure System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Endoscope Closure System provides a therapeutic device for use with an endoscope, the therapeutic device including an end effector assembly having a base for placement at the distal end of the endoscope, rotatable relative to the base. The end effector and the mounting part for attaching the base to the endoscope. The mounting portion is elastically compressible and radially compressible for insertion into the instrument channel, whereby the expansion force of the elastically compressed mounting portion holds the seat against the distal end of the endoscope. The mounting portion also includes an opening extending longitudinally therethrough, the opening being communicable with the instrument channel and sized to receive an endoscopic instrument therethrough.

This report studies the global Endoscope Closure System production, demand, key manufacturers, and key regions.
