## Abstracts

The global Endoscope Disinfectant market size is expected to reach \$ 1311 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Endoscope disinfectants are specialized products designed for the high-level disinfection or sterilization of flexible endoscopes, rigid endoscopes, and their associated accessories following the cleaning process. Common active ingredients include orthophthalaldehyde, peracetic acid, glutaraldehyde, chlorine dioxide, chlorine-based disinfectants, and complex oxidation systems. Key characteristics of these products include a broad spectrum of antimicrobial activity, rapid action, compatibility with the intricate lumen structures of endoscopes, and strict requirements regarding residue control. Furthermore, their effective utilization necessitates integration with established endoscope cleaning and disinfection protocols, automated endoscope reprocessors, and hospital infection control guidelines. In 2025, the global sales volume is projected to reach approximately 28.6 million liters, with an average unit price of approximately \$32 per liter and a capacity utilization rate of approximately 73%. Upstream enterprises primarily comprise suppliers of disinfectant raw materials, peroxides, aldehyde-based chemicals, stabilizers, corrosion inhibitors, surfactants, purified water, packaging containers, testing indicators, and hazardous chemical logistics providers. Downstream entities predominantly consist of hospital-based digestive endoscopy centers, respiratory endoscopy centers, urology endoscopy centers, ENT departments, specialized endoscopy diagnostic and treatment centers, private clinics, third-party sterile processing facilities, research institutions, and medical device reprocessing service providers. The gross profit margin for these products stands at approximately 38%. Regarding the product cost structure, active disinfectant ingredients account for 30%; stabilizers and corrosion inhibitors for 12%; purified water and solution preparation for 6%; packaging materials for 10%; quality testing and

microbiological validation for 8%; production labor and energy consumption for 7%; regulatory registration and validation documentation for 8%; warehousing and logistics for 9%; and distribution channels and other miscellaneous expenses for 10%. The list of demand drivers includes the need for high-level endoscope disinfection, consumables for automated endoscope reprocessors, hospital infection control measures, support for the growing volume of endoscopic diagnostic and therapeutic procedures, standardization requirements for sterile processing centers, the need for rapid turnaround disinfection cycles, demand for low-residue and low-corrosion products, and requirements for accompanying concentration monitoring solutions. The downstream client base encompasses general hospitals, specialized hospitals, digestive endoscopy centers, respiratory endoscopy centers, health examination centers, dental and ENT clinics, primary healthcare institutions, third-party disinfection service providers, and medical device reprocessing centers. In terms of business opportunities, policy-driven factors stem primarily from heightened requirements for hospital infection control, strengthened standards for endoscope cleaning and disinfection, upgrades in medical quality management, capacity building for endoscopy services at the primary care level, and increasingly stringent compliance reviews for disinfection products used in healthcare institutions. Technological innovation is driven mainly by the development of rapid, high-level disinfection formulations; low-corrosion and corrosion-inhibiting systems; low-odor formulations; real-time concentration monitoring; automated dosing systems; compatibility validation with endoscope equipment; and traceable packaging and labeling. Changes in consumer demand?manifested in hospitals placing greater emphasis on disinfection efficiency, endoscope protection, personnel safety, minimized residual risks, operational simplicity, cost control, and supply stability?are driving the evolution of endoscope disinfectants toward solutions characterized by rapid action, low corrosivity, low irritation, machine compatibility, and robust regulatory documentation support.
