Abstracts

The global Endoscope Spray Catheters market size is expected to reach \$ 210 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, global production capacity of endoscope spray catheters reached approximately 50 million units, with actual output around 36.25 million units. The average selling price was about USD 4 per unit, and leading manufacturers achieved gross margins of 55%–70%. An endoscope spray catheter is a flexible, small-diameter tube used with endoscopes to deliver liquids, such as dyes, contrast agents, or therapeutic solutions, to targeted areas inside the gastrointestinal or respiratory tract during diagnostic or therapeutic procedures.

Upstream suppliers provide medical-grade polymers (PVC, PU, or silicone), small-scale connectors, and sterilization materials. Midstream manufacturers focus on precision extrusion, diameter control, flexible bending properties, and sterile packaging, mainly located in China, Japan, and the EU. Downstream, the products are distributed through endoscopy consumables distributors and hospital procurement. End users prioritize tip flexibility, spray precision, material biocompatibility, and compatibility with major endoscope brands.

The market for endoscope spray catheters is expanding due to increasing endoscopic procedures and the demand for precision diagnostic and therapeutic delivery. Hospitals prefer single-use catheters for safety, sterility, and efficiency. Product differentiation is moving toward catheters with adjustable spray patterns, enhanced tip flexibility, and kink resistance. Emerging markets in Asia and Latin America are seeing growth as endoscopy adoption increases. Manufacturers focus on improving material

biocompatibility and compatibility with a wide range of endoscope systems. Overall, the segment exhibits steady growth with high clinical dependence and moderate to high margins.
