According to our (Global Info Research) latest study, the global Endoscopes market size was valued at US\$ 9177 million in 2025 and is forecast to a readjusted size of US\$ 13470 million by 2032 with a CAGR of 5.7% during review period.

An endoscope is an illuminated optical, typically slender and tubular instrument (a type of borescope) used to look deep into the body and used in procedures called an endoscopy. Endoscopes use tubes which are only a few millimeters thick to transfer illumination in one direction and high-resolution images in real time in the other direction, resulting in minimally invasive surgeries. They can be used to examine visually and diagnose, or assist in surgery such as an arthroscopy. An endoscope is a long, thin, flexible tube that has a light and camera at one end. Images of the inside of your body are shown on a television screen. Endoscopes can be put into the body through the mouth and down the throat, or through the bottom. An endoscope can also be put inside the body through a small cut (incision) made in the skin when keyhole surgery is being done.

Global key players of Endoscopy Device include Stryker, Karl Storz, Olympus, etc. The top three players hold a share over 60%. Asia-Pacific is the largest market, has a share about 40%, followed by North America and Europe, with share 26% and 25%, separately. In terms of product type, Rigid Endoscopes is the largest segment, occupied for a share of 88%. In terms of application, Hospital and Clinic has a share about 82 percent.
