Abstracts

The global Endoscopic Biopsy Valves market size is expected to reach \$ 239 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Endoscopic biopsy valves are single use medical consumables installed at the biopsy channel inlet or instrument port of flexible gastrointestinal endoscopes. Their primary function is to maintain a controlled seal around the biopsy channel while endoscopic accessories such as biopsy forceps, snares, guidewires, injection needles and other therapeutic devices are inserted or withdrawn. By sealing the channel opening, the product helps reduce leakage of fluids, air and biological material, supports stable insufflation during diagnostic and therapeutic procedures, and contributes to infection prevention workflow in endoscopy units. Endoscopic biopsy valves are typically made from medical grade plastics, silicone, thermoplastic elastomers and flexible sealing membranes. Main product forms include standard single use biopsy valves, biopsy valves with side ports or irrigation access, compatible biopsy valves designed for different endoscope brands and channel port dimensions, and biopsy valve components included in single use endoscope valve sets. Key specifications include port compatibility, sealing membrane elasticity, instrument passage resistance, fluid leakage control, air tightness, sterilization method, single use labeling and biocompatibility. The product is mainly used in gastroscopy, colonoscopy, duodenoscopy, endoscopic ultrasound and therapeutic gastrointestinal endoscopy procedures. In 2025, global shipments of endoscopic biopsy valves are estimated at about 53 million units, the industry average price is about USD 2.85 per unit, and the industry average gross margin is about 48%.

Endoscopic biopsy valves represent a small but clearly defined segment within gastrointestinal endoscopy consumables. The upstream supply chain mainly consists of

medical grade plastics, silicone, thermoplastic elastomers, precision molds, sterile packaging materials and contract sterilization services. The midstream value chain covers product design, injection molding, sealing membrane assembly, sterilization, quality validation and regulatory registration. Downstream demand comes mainly from hospital endoscopy centers, ambulatory endoscopy units, specialty clinics and medical consumable distribution networks. Although the unit value of the product is relatively low, demand is closely linked to procedure volume, therapeutic endoscopy penetration and infection prevention requirements. As a result, the market behaves more like a stable consumable category than a capital equipment cycle.

Competition is shaped by a combination of established international brands, original endoscope ecosystems and Asia based manufacturing capacity. Premium brands remain stronger in major hospital systems and regulated channels, while manufacturers in China and Hong Kong are increasingly active in compatible products, contract manufacturing and price sensitive markets. The shift from reusable valves to single use accessories continues to support category growth, especially in markets where infection control compliance and workflow efficiency are becoming more important. Industry consolidation has also strengthened product portfolios within endoscopy infection prevention, while regional supply chain migration has increased the role of Asian manufacturing in global procurement.

The policy environment is generally supportive, as hospital infection prevention rules, endoscope reprocessing standards, single use device management and medical device registration requirements all reinforce demand for validated disposable accessories. Future growth is expected to come from rising gastrointestinal endoscopy volumes, broader use of therapeutic procedures and increasing penetration of single use consumables in emerging markets. The main risks are hospital cost pressure, bundled original equipment valve systems and the gradual adoption of fully disposable endoscopy platforms. Even so, biopsy valves have a strong functional role, low unit cost and high procedure linkage, which should allow the category to maintain steady long term demand.

This report studies the global Endoscopic Biopsy Valves production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Endoscopic Biopsy Valves and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Endoscopic Biopsy Valves that

contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Endoscopic Biopsy Valves total production and demand, 2021-2032, (K Units)

Global Endoscopic Biopsy Valves total production value, 2021-2032, (USD Million)

Global Endoscopic Biopsy Valves production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global Endoscopic Biopsy Valves consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: Endoscopic Biopsy Valves domestic production, consumption, key domestic manufacturers and share

Global Endoscopic Biopsy Valves production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global Endoscopic Biopsy Valves production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global Endoscopic Biopsy Valves production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Endoscopic Biopsy Valves market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include STERIS plc, Boston Scientific Corporation, Olympus Medical Systems Corporation, CONMED Corporation, Micro-Tech (Nanjing) Co., Ltd., GA Health Company Limited, SML Med-Tech Solutions Limited, Ruhof Corporation, Anrei Medical (Hangzhou) Co., Ltd., Changzhou Endoclean Medical Device Co., Ltd., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Endoscopic Biopsy Valves market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (K Units) and average price (US\$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the

forecast year.
